

MUHAMMAD ANS

SOFTWARE ENGINEER

+923254518068

muhammdans@yahoo.com

Lahore, Punjab

OBJECTIVE

Quick learner seeking to contribute, and aiming to develop my skills.

SKILLS & ABILITIES

Programming Skills

- Studied data structures and algorithms in C++, Java
- Backend with python (FASTAPI)
- Frontend development with React
- Thread handling and socket programming in C++
- Competitive programming in C++
- Web Scraping with python Selenium
- Basic Android App Development (Kotlin)

Database

- PostgreSQL with Python (psycopg2, SQLAlchemy)
- Oracle SQL (complex queries, joins)

Cloud, DevOps and Architecture

- Handle EC2 instances of AWS
- Microservices architecture
- Docker (Containerization)
- Docker Compose
- Redis Pub/Sub

EDUCATION

(2024 – 2028) - Currently pursuing BS Software Engineering from Punjab University, Lahore

COMMUNICATION

Strong written and technical communication skills and actively working on verbal fluency

PROJECTS

- Chat Client Web Application
 - Users can join and create text and voice channels, send personal text messages to each other.
 - Uses FASTAPI as backend server with microservices architecture, frontend with React and WebSockets for live connection. POSTGRESQL with SqlAlchemy ORM. Microservices deployed on railway.
 - **Project link:** <https://github.com/mohammad-ans/YappyYap>
- Course Pre-requisite Visualizer
 - Students can access degrees' structure, courses as graphs or simple structure. Admins can add and manage degrees, courses and their relationships

- Uses FASTAPI and POSTGRESQL with SQLAlchemy at the backend and frontend with React and Graphs with Cytoscape.
- **Project link:** <https://github.com/mohammad-ans/Course-Prerequisite-Visualizer>

- Simple full stack chat website.
 - The user can chat with the client in real time by typing and receiving messages from the terminal.
 - Uses FASTAPI and POSTGRESQL at the backend and used reverse proxy of nginx on an EC2 instance with Certbot (https certificates) to launch the site on my personal domain.
 - **Project link:** <https://github.com/mohammad-ans/Simple-chat-website>

- Multi-threaded TCP server
 - Handle clients dynamically by properly balancing the load on the threads
 - Uses POSIX sockets, utilizes a threadpool in Linux using C++ (under development for validating and parsing http requests)
 - **Project link:** <https://github.com/mohammad-ans/Http-Server>

- Snake ladder game (Basic)
 - Two users can play this game simultaneously taking turns while rolling the dice and taking their pawn to victory while facing snakes on the way
 - Written in Kotlin
 - **Project link:** <https://github.com/mohammad-ans/BoardGame>
